

Cyprus .NET User Group

May 13, 2009

Using intranet portals within the organization and various other internet portals on the World Wide Web has become the modern way of collaboration, learning, process and document management in our days.

Microsoft SharePoint technologies are a collection of products and software elements that allow building all of the above and even more. They can be used for hosting websites that access shared workspaces and documents. Additionally, they allow the users to manipulate various controls known as "web parts" and much more.

Cyprus .NET User Group, committed to the .NET and SQL Server community in Cyprus, continues its regular monthly events and dedicates this month's event to **Microsoft SharePoint technologies** with focus on **the SharePoint Feature Areas**.

Microsoft SharePoint Feature Areas **(by Evangelos Hadjichristodoulou)**

Our invited guest speaker for May's community event is Evangelos Hadjichristodoulou, Services Consultant at Microsoft Cyprus and great friend of our User Group!

The main SharePoint feature areas for which Evangelos will talk about are: Business Intelligence, Collaboration, People & Personalization, Search, Partner Solutions, Content Management and Business Process & Forms.

Abstract

SharePoint has a huge range of feature areas, well beyond portals. Come to this session to see a high level overview of several SharePoint pillars. Developers will gain a better understanding on how to position SharePoint for their projects.

An event will take place on Wednesday, May 13th at the conference room of Microsoft Cyprus, with start at 19:00.
