

# Cyprus .NET User Group – Event No. 6

November 7<sup>th</sup>, 2005

## Introduction to "ClickOnce" Deployment Technology

(by Panayiotis Panayiotou)

"ClickOnce" is a new application deployment technology that is introduced with Visual Studio 2005 and .NET 2.0, that makes deploying a Windows Forms based application as easy as deploying a web application. "ClickOnce" applications can be deployed via web servers, file servers or CDs. A "ClickOnce" application can choose to be installed, meaning it gets start menu & add/remove program entries, or an app can simply be run & cached. "ClickOnce" has several ways it can be configured to automatically check for application updates. This session will provide an introduction to this new technology, and through demos demonstrate how it can benefit your company's deployment processes.

The event will take place on Monday, November 7th at the conference hall of local Microsoft offices in Nicosia, starting at 19:00. For more information please visit CDNUG Yahoo! Group website (<http://groups.yahoo.com/group/CDNUG/>).
