

Third User Group meeting

The Third CDNUG meeting will include two sessions provided by the group president Chad Z. Hower aka Kudzu. First session named "ADO.NET: Databinding, Best Practices and Pitfalls" suppose to clear the dust around effective usage of .NET database access layer; second session will give an insight to the web application development framework IntraWeb by Atozed Software and it's coexistence with ASP.NET.

ADO.NET: Databinding, Best Practices and Pitfalls (by Chad Z. Hower)

Getting the most out of ADO.NET DataSets can be quite an adventure. In this session, you will learn how to use DataSets and the tips and tricks of using DataSets in a variety of situations. Starting with an intelligent approach to the DataSet vs. DataReader question, session will extend to some more specialized issues like connection pooling, transactions and handling multiple result sets.

Extending ASP.NET web applications (by Chad Z. Hower)

IntraWeb complements Webforms and is best used in conjunction with Webforms. IntraWeb facilitates the development of more powerful, less costly web applications which run better and are easier to develop compared to plain Webforms. In fact IntraWeb is built upon ASP.NET's HTTP handlers and modules.
